Chief Executive's Review

Dear Shareholders,

Wienerberger continued its growth course in spite of a weaker economic environment, higher energy costs and a long, hard winter. Group revenues rose by 10% to € 922.8 million and EBITDA increased 9% to € 201.7 million for the first six months, even though the comparable prior year values were unusually good. These developments were supported by the first full-year consolidation of the brick business in Great Britain as well as our profitable growth projects. Results were negatively affected by a slowdown on three key markets: Poland, Hungary and Germany.

The second quarter brought a general improvement in the market situation over the start of the year, but this upturn was unable to completely offset the relatively slow first quarter. Recent developments in Poland have shown that the market, and therefore our results for this business year, will be weaker than originally expected. Hungary is also characterized by declining demand, but we have been able to utilize our production capacity through exports to Romania. In the Czech Republic, Romania and Slovakia, Wienerberger was able to increase results in a sound market environment. Demand was strong in Belgium, France, Italy and Switzerland. In contrast, the first six months in Germany were weak because the construction season only started after Easter and there are still no signs of recovery. In the USA, the demand for facing bricks also remained strong during the second quarter and the outlook for 2005 is promising. For the entire year, stronger declines are forecasted in Germany, Poland and Hungary. On most of the other Wienerberger markets, I expect an improvement in earnings.

Wienerberger is planning growth investments of roughly € 250 million for 2005. These bolt-on projects will be financed primarily from cash flow, with approximately 70% representing investments in new plants or the expansion of capacity and 30% acquisitions. We may also make larger acquisitions if suitable opportunities arise. The growth projects are ranked according to profitability and availability, with current plans calling for almost one-half in Eastern Europe, 40% in Western Europe and the remainder in the USA. We have started to position our products in Bulgaria through imports and, similar to the Ukraine, are preparing for our market entry with production facilities. Construction is progressing on our new plant in Russia, with the start of operations scheduled for the second quarter of 2006. We have already successfully started or completed more than 25 projects for the construction of new plants, expansion of capacity or acquisitions in 2005.

Wienerberger used the current favorable level of interest rates to place its first corporate bond in April. The issue covered a total volume of € 400 million at 3.875% with bullet repayment after seven years, and the proceeds were used to refinance short-term liabilities in July. In May we concluded a share buyback program to service our stock option plans, and repurchased 600,000 shares at an average price of € 35.54 over the Vienna Stock Exchange. A total of € 21.3 million was spent to acquire these shares.

Our targeted earnings growth of more than 10% is very ambitious given the current economic climate in Europe as well as weakness on a number of key markets and rising energy costs. The long-term success of Wienerberger is based on a balanced geographic portfolio, motivated employees, continuous cost optimization and a profitable growth strategy. This will bring further earnings growth in 2005, although at a lower rate.

*Yours
Wolfgang Reithofer*

Analysis of Results

Earnings

Slowing economic recovery, higher energy costs and a long winter throughout large sections of Europe in 2005 distort the comparison with the unusually good first six months of the prior year. Nevertheless, Wienerberger was able to record growth in both revenues and EBITDA.

Group revenues rose by 10% over the comparable prior year period to € 922.8 million and EBITDA increased 9% to € 201.7 million. This growth was supported by sound development in the North-West Europe and USA segments, while Central-East Europe and Germany reported noticeable declines in sales volumes. Residential construction continued to contract during the second quarter above all in Poland and, as expected, Hungary showed weaker development than in the prior year. In North-West Europe, the favorable market environment as well as the first full-year consolidation of Koramic Roofing and the brick business had a positive impact. The above-mentioned sales volume declines in Hungary, Poland and Germany were largely offset by higher prices and volume growth in Belgium, Holland and France. In the USA the demand for bricks remained strong. The negative effect of the weaker dollar on Group results was more than offset by currency revaluations in a number of East European countries. Sharply rising energy prices were reflected in a € 15 million charge to Group EBITDA. In total, energy costs rose significantly during the first half-year to equal 12.7% of revenues (2004: 11.0%).

Following a high level of investment activity in the previous year and resulting increase in depreciation, EBIT reported by the Group increased by only 2% to € 123.4 million. Financial results improved from € -13.9 to -11.7 million. Higher interest expense required to finance the Group's expansion strategy is contrasted by significantly increased contributions from the investments in Pipelife (50%) and Tondach Gleinstätten (25%), which are consolidated at equity. Profit before tax rose by 5% to € 111.7 million. A lower Group tax rate of 20.4% (2004 22.7%) supported an increase in profit after tax to € 88.9 million, which is 8% over the prior year level. Earnings per share reached € 1.20, compared to € 1.22 for the first half of 2004. This 2% decline is the result of a 5% increase in the weighted number of shares outstanding to 73.3 million (2004: 69.6 million.) following the capital increase in 2004.

Cash Flow

Gross cash flow rose by 8% to € 162.9 million. Cash flow from operating activities fell from € 92.9 to -41.0 million because of the seasonal increase in working capital during the first six months combined with lower sales volumes in Germany, Poland and Hungary as well as negative non-cash currency translation effects of € 36.0 million from the hedging reserve. Cash flow from operating activities should show a high positive balance during the second half-year following the planned reduction in working capital over the coming months. Cash outflows of € 160.9 million for capex and acquisitions includes € 40.5 million of maintenance, replacement and rationalization investments (maintenance capex) and € 120.4 million of acquisitions and the construction or expansion of plants (growth investments). Dividends totaling € 78.0 million were paid to shareholders and € 21.3 million was used for the share buyback program.

Revenues and EBITDA

as a % of 100

Revenues Q1 - Q2

in € million

Asset and Financial Position

Group equity totaled € 1,372.4 million, and remained virtually unchanged from the level at year-end 2004. Net debt rose by 37% to € 1,045.2 million because of the dividend payment, investments and share buyback program, and will be further reduced over the next two quarters through cash flow from operating activities (depending on further investments). Gearing has risen from 55.8 to 76.2% since December 31, 2004 for seasonal reasons and will presumably decline to roughly 65% during the course of the year, which leaves sufficient room for the continuation of our profitable growth strategy.

Second Quarter 2005

Group revenues for the second quarter rose by 12% over the comparable prior year period to € 589.0 million. In Central-East Europe, higher revenues were recorded in Austria, Romania and by Semmelrock pavers, but major declines were reported in Poland, Hungary and by Bramac concrete roof tiles. Central-West Europe profited from the initial consolidation of two clay roof tile plants acquired from von Müller in Germany and the continuation of favorable market conditions in Italy and Switzerland. Growth in North-West Europe was supported by strong new residential construction in Belgium and France as well as the first full-year consolidation of the brickbusiness in Great Britain. Higher revenues in the USA were the result of price increases and the acquisition of building material merchants.

Group EBITDA rose by 10% during the second quarter to € 147.4 million. Substantial earnings improvement was registered in Austria, Switzerland, Italy, Belgium, Holland, North Europe and the USA, but significant declines were reported in Hungary and Poland as well as by Semmelrock and Bramac.

Segments

Revenues by Segment

Continued expansion strategy in East Europe despite current market weakness

Reserved outlook for earnings growth in 2005

Central-East Europe

The Central-East Europe segment reported a decline in earnings for the first six months because of the long winter and an unusually strong comparable period in the prior year. We assume that this is a temporary development, and still consider these countries to be attractive long-term growth markets. With a 24% share of total revenues, the Central-East Europe segment still recorded an above-average 29% of Group EBITDA.

Revenues declined 4% to € 223.3 million and EBITDA fell 12% to € 58.2 million. In addition to adverse weather conditions at the start of the year, this development was the result of massive advance purchases during the first half of 2004 and current weakness of new residential construction in Poland und Hungary. Two-digit declines in sales volumes and subsequent pressure on prices were noted in these countries. In order to adjust our capacities and optimize production costs, the shut-down of two older factories in Poland is currently in progress. Semmelrock pavers (75% holding) and the 50/50 Bramac concrete roof tile joint venture were also confronted with difficult market conditions in Central-East Europe and reported a drop in earnings. In the Czech Republic, earnings remained at a high level and lower sales volumes were offset by price increases. Strong growth in sales volumes was recorded in Romania, and led to a significant improvement in earnings. Higher revenues and earnings were also generated by brick activities in Slovakia and Austria.

Wienerberger continued to pursue its expansion strategy in Central-East Europe during the first months of the year with a number of bolt-on projects. The new Jezernice brick plant in the Czech Republic started operations at the beginning of the year, the Tiszavasvari plant in Hungary is in the start-up phase and two brick plants were acquired in the north of Slovakia. A further nine bolt-on projects for bricks and pavers are currently in progress or have already been realized.

We expect a slight decline in earnings for the Central-East Europe segment in 2005, which is due above all to temporary weakness in new residential construction in Poland und Hungary. Wienerberger intends to utilize the current market situation to further expand its positions on this long-term growth market.

Central-East Europe		1-6/2004	1-6/2005	Chg. in %

1) Sales volumes are not proportional, but reflect 100%

Central-West Europe

The Central-West Europe segment recorded a slight decline in earnings, which must be considered satisfactory in view of the weak new residential construction in Germany. This development was supported by the steady optimization of our activities as well as good results in Italy and Switzerland. The segment generated 19% of Group revenues and 18% of EBITDA.

Revenues in Central-West Europe remained stable at € 180.8 million, but EBITDA decreased by a slight 2% to € 35.6 million. The decline in earnings originated in Germany, where adverse weather conditions brought construction activity to a virtual standstill during the first quarter of 2005. Both brick and roof tile activities registered a drop in sales volumes, which also led to increasing pressure on the prices of roof tiles. The German clay roof tile segment reported negative EBITDA for the first six months due to costs for the integration of the roof tile plants acquired from von Müller as of April 1, 2005 into Koramic business operations.

Excellent results were reported by roof tile and brick activities in Switzerland as well as the hollow brick business in Italy. While sales volumes of bricks remained stable in Switzerland and the roofing sector reported slightly lower volumes, both product areas were able to increase prices. Italy recorded higher volumes as well as modest price increases. For 2005 we expect the market situation in Germany will remain difficult and lead to continuing pressure on margins, which could create further opportunities for consolidation. In Switzerland and Italy, the positive earnings trend of the past months should continue throughout the remainder of the year.

Central-West Europe		1-6/2004	1-6/2005	Chg. in %
Revenues	<i>in € mill.</i>	180.3	180.8	0
EBITDA	<i>in € mill.</i>	36.5	35.6	-2

Sales volumes clay roof tiles	<i>in mill. m²</i>	1.8	1.7	-5

North-West Europe

The North-West Europe segment again served as growth driver in the Wienerberger Group during the first half of 2005. The overall market situation was very good in France and Belgium, stable in Holland and Scandinavia and declining in Great Britain. The first full-year consolidation of Koramic Roofing and the brick business had a positive impact on results. This segment recorded 40% of Group revenues and 41% of EBITDA.

EBITDA by Segment

North-West Europe again serves as growth driver in the Wienerberger Group

Significant increase in earnings with successful growth strategy

Revenues in North-West Europe increased 24% to € 370.1 million and EBITDA rose by 44% to € 83.4 million. In addition to acquisitions, this growth was supported by higher sales volumes of bricks in France und Belgium as well as increased sales volumes of roof tiles in Northern Europe. Moderate increases in hollow brick prices on most markets had a positive impact above all in Belgium, Holland and France. Facing brick activities in Great Britain and Holland reported a decline in sales volumes, but higher energy costs were offset by price increases. Slight declines in sales volumes were registered for clay roof tile activities in Belgium, Holland and France, but price levels also in this product area improved.

Market conditions good in Belgium and France, stable in Holland, declining in Great Britain

We expect strong new residential construction and stable to slightly positive development on the renovation market in Belgium and France through the end of this year and thereafter, which should improve earnings in these countries. Along the high freight costs for shipments to the southern regions of the country are slowing earnings growth in France. In Holland there are still no signs of the expected upturn in new residential construction, but operating earnings should show good development because of our ongoing cost optimization and rising exports to Northern Europe. In Great Britain, new residential construction is expected to remain weak during the second half of the year. Following the integration of the brick business, Wienerberger is concentrating on the optimization of plant structures.

North-West Europe		1-6/2004	1-6/2005	Chg. in %
Revenues	<i>in € mill.</i>	298.4	370.1	+24

Sales volumes of clay roof tiles	<i>in mill. m²</i>	6.0	6.1	+1

USA

Strong economy and population growth support brick sales

As the largest facing brick market in the world, the USA is an important growth region for the Wienerberger Group. The strong American economy, positive demographic development and low mortgage rates keep residential construction at a high level. In June, the annualized housing starts number reached a level of roughly 2 million. The USA segment generated 17% of Group revenues and 15% of EBITDA for the first six months of 2005.

Price increases but negative foreign exchange effects from weaker dollar

Revenues in the USA rose to € 158.6 million and exceeded the first half of 2004 by 16%, while EBITDA increased 11% to € 30.3 million. The slight margin decline resulted from the acquisition of building material merchants during the previous year. The sale of merchandise (bricks, mortar and related products) now represents 24% (2004: 14%) of revenues in the USA. The strong topline growth was also supported by a 9% rise in local price levels, which was able to offset a 2% decrease in sales volumes. Production facilities were operating at full capacity, and the decline in sales volumes was due primarily to temporary shut-downs for plant expansion measures in June.

The weaker average exchange rate for the US dollar had a negative impact on Group results, and triggered a decrease of € 7.4 million in revenues and € 1.4 million in EBITDA.

For the remainder of this year, we expect a slight decline in housing starts from the current high level. However, we assume the demand for facing bricks will remain strong as rising interest rates should direct the forecasted slowdown in housing starts primarily toward the low-price segment, in which bricks are hardly used. The Wienerberger strategy for the USA is focused on the further expansion of direct sales as well as the construction of large plants to optimize production costs.

Positive outlook for brick sales in coming months

USA		1-6/2004	1-6/2005	Chg. in %

Employees		2,052	2,172	+6
Sales volumes of facing bricks	<i>in mill. WF</i>	622	611	-2

Investments and Other

The Investments and Other segment is comprised primarily of the holding company and related costs as well as the non-core activities of the Group, which include real estate and a stove tile plant in Austria. Revenues in this segment fell 28% to € 8.3 million and EBITDA dropped from € -2.5 to -5.8 million because of higher holding company costs.

Increased holding company cost because of expansion strategy

Notes to the Interim Financial Statements

Significant Accounting Policies

The interim report as of June 30, 2005 was prepared in accordance with the principles set forth in International Financial Reporting Standards, Guidelines for Interim Reporting (IAS 34).

The accounting and valuation methods in effect on December 31, 2004 remain unchanged. Emission trading directive 2003/87/EC took effect in the European Union on January 1, 2005 and requires the Wienerberger Group to redeem certificates for the emission of the greenhouse gas CO₂, which is created as part of the process used to manufacture bricks. In accordance with this directive, companies that emit CO₂ are granted a specific number of free certificates by municipal authorities to redeem this obligation. Depending on actual emissions, companies may either purchase additional certificates or sell unused certificates on the market. The Wienerberger Group has been allocated roughly 2.7 million tons of free CO₂ emission rights per year for the period from 2005 to 2007. The IASB defined an accounting procedure for emission certificates in the form of IFRIC 3, but this regulation was rejected by the EU Commission. Wienerberger therefore continues to record emission rights based on IAS 20 and IAS 38 at an acquisition price of zero. In keeping with this accounting treatment, the income statement only includes expenses for the required purchase of additional certificates due to insufficient allocation or income from the sale of unused emission rights. No emission certificates were bought or sold during the first six months of 2005.

Wienerberger manages its business on a regional basis, which gives local operating management responsibility for all core products within a country. The segment reporting reflects the regional focus of the Wienerberger Group, and remains unchanged since December 31, 2004.

As part of the 2005 tax reform, the Austrian Parliament reduced the corporate tax rate from 34 to 25%. This tax rate takes effect with the assessment for 2005. In accordance with IAS 12.47, all provisions for deferred taxes in Austria have been calculated at this new lower rate since December 31, 2004.

IFRS (IAS) differ from Austrian accounting regulations (Austrian Commercial Code) in the calculation of deferred taxes, the determination of provisions (including employee-related provisions), the valuation of marketable securities, and the reporting of extraordinary income and expense. For additional information on the accounting and valuation principles, see the financial statements as of December 31, 2004, which form the basis for these interim financial statements.

Basis of Consolidation

The consolidated financial statements include all major Austrian and foreign companies in which Wienerberger AG has management control or directly or indirectly owns the majority of shares. Joint venture companies of the Schlagmann and Bramac Groups are consolidated on a proportional basis at 50%. The majority stake in von Müller Dachprodukte GmbH & Co. KG with two clay roof tile plants in Germany, which was acquired in March 2005, as well as two brick plants in Slovakia that were purchased during the second quarter were consolidated with 100% for the first time.

The comparable prior year period includes Koramic Roofing at only 50% for the first quarter. Three brick plants and one concrete paver plant in Poland, which were consolidated for the first time during the second quarter of 2004, are only included in results for the comparable period of 2004 in part. Furthermore, two brick plants of the Wewers Group in Denmark as well as the brick business, the third largest producer of bricks in Great Britain that was fully consolidated as of September 24, 2004, are also not included in results for the first six months of 2004.

Changes in the consolidation range increased revenues by TEUR 77,188 and EBITDA by TEUR 13,835 for the period from January 1, 2005 to June 30, 2005.

Seasonality

As a producer of building materials, Wienerberger records low production and sales volumes during the first and last months of the year due to the impact of the weather on construction activity. These seasonal fluctuations are demonstrated by data from the first or fourth quarters of the year, which generally lie below results for the second and third quarters.

Notes to the Income Statement

Group revenues rose 10% over the first six months of 2004 to TEUR 922,796.

Operating profit before depreciation and amortization (EBITDA) reached TEUR 201,676, which represents an increase of 9% over the prior year value of TEUR 185,806. Financial results for the first six months of 2005, including income from associates, comprise TEUR -22,676 (2004: TEUR -16,572) of net financing costs and TEUR 11,015 (2004: TEUR 2,687) of other income from financing activities. Following the harmonization of reporting schedules, results reported by the Tondach Gleinstätten Group (clay roof tiles) were included in the equity valuation for the same reporting period; results recorded for the entire year 2004 were therefore recognized in the first half of this year.

The number of issued shares totaled 74,167,796 as of June 30, 2005. Wienerberger carried out a share buyback during the period from March 24, 2005 to May 6, 2005, which resulted in the purchase of 600,000 shares of Wienerberger stock. As of June 30, 2005 Wienerberger held 1,233,005 shares of treasury stock, which were not included in the calculation of earnings per share. The weighted number of shares outstanding from January 1, 2005 to June 30, 2005 was 73,277,874.

Notes to the Statement of Cash Flows

Gross cash flow totaled TEUR 162,880 for the first six months and exceeded the comparable prior year level by 8%. The dollar-euro swap led to a reduction of TEUR 35,974 in the hedging reserve, and caused a decrease of the same amount in cash flow from operating activities. The contra item to the hedging reserve is reported as part of cash flow from investing activities under marketable securities, which increased by TEUR 35,974. Cash outflows of TEUR 160,832 for investments and acquisitions represent TEUR 40,464 of maintenance, replacement and rationalization investments (maintenance capex) and TEUR 120,368 of acquisitions and the construction or expansion of plants (growth investments). Dividends totaling TEUR 78,040 were paid to shareholders and TEUR 21,325 was used for the share buyback program.

Notes to the Balance Sheet

Growth investments made during the first months of the business year increased fixed and financial assets by TEUR 120,368. Net debt rose by TEUR 282,791 because of seasonal working capital increases until mid of the year, the dividend payment, investments and the stock buyback program. Positive currency translation adjustments for the first half of 2005, which were not recognized to the income statement, totaled TEUR 50,977; these differences were generated primarily in the USA. The increase in equity is contrasted with a decline of TEUR 35.974 in the hedging reserve. Profit after tax led to an increase of TEUR 87,866 in equity. The seven-year, bullet repayment bond that was issued in April 2005 with a volume of TEUR 400,000 is shown under long-term borrowings.
